#### **DETAILED ACTION**

## Response to Arguments

1. Applicant's arguments with respect to claims 1, 7, 13, 17 and 21 have been considered but are most in view of the new ground(s) of rejection.

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-6 and 13-16 are rejected under 35 U.S.C. 102(e) as being anticipated by United States Patent Application Publication 2002/0141720 to Halgren et al.

As to claim 1, Halgren discloses in figures 1 and 2, an apparatus for multiple-channel dense wavelength division multiplexing (DWDM), the apparatus comprising:

 A housing capable of being mounted in a front panel of a distribution frame in a switching office (10);

Application/Control Number: 09/875,418

Art Unit: 2874

- Circuitry contained inside the housing capable of performing multiple-channel
  passive DWDM by receiving a plurality of inputs and one output, the circuitry
  further capable of providing a non-intrusive monitoring port (Paragraph 31 and
  32);
- A faceplate attached to the housing with a plurality of openings (Paragraph 26);
   and
- A plurality of connectors, wherein each connector resides in one of the plurality
  of openings in the faceplate, each connector having two ends, one being
  connected to an input of the circuitry and another end (Paragraph 18 and 26).

As to claim 2, the circuitry is capable of receiving 13 inputs.

As to claim 3, the input cable is a fiber optic cable (51).

As to claims 4, and 5, the input cable carries a signal of a defined standard wavelength and is capable of carrying an optical signal around 1550nm.

As to claim 6, one of the inputs is for maintenance purposes (Paragraph 32).

As to claim 13, figures 1 and 2 discloses a method for providing relief for an interoffice facility fiber optic routes without constructing new fiber optic cable facilities, the method comprising:

Mounting a passive WDM module in a shelf of a fiber optic distribution frame of
a central office, the shelf having a front and back side, the passive WDM module
capable of receiving fiber optic cable connectors on a faceplate of the module
wherein each cable connector has a front and back side (52);

· Application/Control Number: 09/875,418

Art Unit: 2874

- Terminating a plurality of incoming fiber optic cables on the back side of connectors in the shelf;
- Connecting a plurality of connector fiber optic cables from the front side of the connectors in the shelf to the faceplate of the module; and
- Connecting an output connector cable from the faceplate of the module to an outgoing fiber optic connector on the front side of the shelf (51).

As to claim 14, the terminating step comprises receiving a plurality of incoming/outgoing fiber optic cables from another central office (Figure 3).

As to claim 15, the number of incoming fiber optic cables are 12 (Paragraph 28).

As to claims 16, the outgoing fiber optic cable is connected to the next central office (Figure 3).

The limitations in the claims after the word "capable" have no patentable weight. The details of those claims are not specifically claimed and have not been considered as a limitation to the claim. However, the rack structure of Halgren et al. is capable of performing the recited claim limitations.

#### Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

'Application/Control Number: 09/875,418

Art Unit: 2874

4. Claims 7-12 and 17-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Halgren as applied to claims 1-6 and 13-16, respectively above.

Halgren discloses a passive DWDM with inputs and outputs as described in rejections of above claims, but fails to explicitly disclose circuitry capable of performing passive dense wavelength division de-multiplexing.

It is well known in the art to use DWDM for multiplexing or demultiplexing depending on the desired application.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use a demultiplexer in an optical system in order to properly route and transmit optical signals.

### Allowable Subject Matter

5. The following is a statement of reasons for the indication of allowable subject matter:

The prior art made of record fails to explicitly disclose a method for providing spare parts in a

central office equipped with a plurality of laser transmitters of different frequencies with a spare

laser transmitter of a single frequency. Therefore, claim 21 is allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eric Wong whose telephone number is 703-305-4741. The examiner can normally be reached on Monday through Friday, 830AM - 430PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rodney Bovernick can be reached on 703-308-4819. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

· Application/Control Number: 09/875,418

'Art Unit: 2874

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
